Project Description

According to GCF website, the project will strengthen water supply through the design and construction of a new water intake by the River Rewa, with a pumping station, wastewater treatment (WWT) plant, clear water reservoir, and pipeline to increase water production by 30,000 m3 per day. This will improve climate resilience by taking water from further up the river system to avoid salinity. Wastage will be reduced through meter replacement and improved leak detection and repairs. Wastewater management will be strengthened by upgrading and increasing the capacity of the Kinoya WWT plant, improving sewer coverage, and adding new treatment facilities. The project will also strengthen water management and delivery capacity of the responsible institutions.
